

## Chiswick Gate, Hogarth Basements

The contract, led by Henry Construction, was to form a levelling coat of Shotcrete over the contiguous piles of a basement in this new development.

A thin layer of sprayed concrete was applied to the piles after they had been cleaned by high pressure jetting. The concrete was then screeded off to line and level to achieve a flat surface suitable to receive waterproofing for habitable sections of the basement.

### Key Aspects:

- Large habitable basement
- Cost effective levelling of piles
- Speed of application in fast track environment
- Flat and uniform profile provided

### KEY ASPECTS:

Large habitable  
basement
